ENERGY-SAVING TIPS ON A BUDGET

Saving energy doesn't have to cost you the big bucks. Try these simple tips to save energy in your home:

- In cold weather, turn your thermostat down to 58-60 degrees at night and 65-68 degrees during the day.
- Open the blinds during the day to let the sun naturally heat your home.
- Close your fireplace and wood stove dampers when not in use to help keep the heat in.
- Keep drafts outside by closing your exterior storm windows.
- Turn off the lights and unplug chargers when not in use.
- Switch to an efficient showerhead - look for the Energy Trust logo at participating retailers to buy qualifying showerheads at discounted prices.

Find additional low-cost and no-cost savings tips at www.energytrust.org/tips or call 1.866.368.7878.
