

TURN THE KEY TO ENERGY SAVINGS

Finding an energy-efficient new home is easier thanks to EPS™, the home energy performance scoring system from Energy Trust of Oregon. These homes feature high-performance heating and cooling systems, insulation, windows and high-efficiency appliances that minimize energy consumption and reduce utility costs. EPS homes are also built above typical building code requirements and reduce annual energy costs by an average of \$600 compared to similar-sized homes.

In the Community to Serve®

A SCORE THAT TELLS YOU MORE

EPS isn't just a number from zero to 200. Rather, it's a simple way to compare similarly sized homes on their energy use and overall costs. EPS also makes it possible to understand the carbon footprint of a home so that prospective buyers are able to make purchase decisions that fit their energy-efficiency goals.

Homes with low scores designate energy savings and come with a scoresheet that describes the home's energy-efficient features. Having an idea of what monthly utility costs will look like before you buy can give you piece-of-mind and help you stay within budget.

Learn how you can use EPS to find the home that's right for you at www.energytrust.org/eps or call 1-866-368-7878.

SEE AN EPS HOME IN PERSON

Take a visit to the Central Oregon Builders Association Tour of Homes to get an in-person look at EPS homes. The tour is happening throughout Bend and Central Oregon during the following dates:

- July 12-14, 2019
- July 19-21, 2019

Check out additional model homes or find other home tours at www.energytrust.org/smarthomebuyer.
